MULTI-UTILITY BUSINESS

National ranking

- In Italy the services of Water, Waste collection&treatment, gas distribution & supply and electricity distribution & supply are often managed at a local level by "municipal" companies (owned by local public entities).
- Italian **government** has **estimated** a number of local multi-utilities **above 1,500** units (Cottarelli report).
- In order to overcome the fragmentation of the market in small medium sized inefficient companies, the Government introduced in 2002 incentives for consolidation.
- Hera was established in 2002 with the merger of 11 multi-utilities municipal companies on the back of these incentives and has expanded since then organically and through further 41 M&A.
- Even today, market fragmentation is high, offering plenty of M&A opportunities

56% LIBERALISED BUSINESS

National ranking

Waste treatment:

- Largest asset base in Italy, Hera is benefitting from the Italian infrastructural gap vs all main EU countries
- Fast growing treatment prices in last 4 years (still ongoing) due to a infrastructural gap

Energy supply:

- Customer base of 3.4 mln clients
- Fastest growing customer base (last 5 years)
- Lowest churn rate in Italy (2018)
- No exposure to energy price fluctuation (negligible power generation, procurement and supply contracts 100% hedged)

Strong competitive advantages

HISTORY IN A NUTSHELL

- Hera is the outcome of the **largest merger** incurred in the **multi-utility sector** (merger of 11 companies in 2002).
- In 2003, **Hera floated** on the Stock Exchange, **promising** to investors that it would have **doubled its Ebitda in 5 years**, exploiting synergies and economies of scale from the merger.
- First financial report highlighted +50% increase of Net profits.
- On the back of these results, Hera has:
 - deployed the business model by merging other 34 companies in the surrounding areas.
 - continued to extract synergies, cost cuttings and efficiency, exploiting the economies of scale and a clear orientation of management towards value creation principles.
- The **un-interrupted growth** ended up in an increased **Ebitda** and **Net Invested Capital** by **6.3x** and a cash generation that has deleveraged the company to 2.7x Debt/Ebitda, despite a constant and increasing dividend per share paid.
- Today the **Group** is **operating** in the **Northern-Eastern part of Italy** (wealthy area) and it is well positioned for a **further step change**, also thanks to **market challenges** of the **next 5 years** and the possibility to leverage its strong competitive advantages

TOP LINE GROWTH

- **REGULATED ACTIVITIES** (50% of Ebitda) adjust tariffs by **inflation**, **interest rates** (spread) and by **development capex**.
- WASTE TREATMENT in Italy is 'short' causing the need to export waste abroad at higher costs (due to more expensive logistics that have a high incidence on the cost base). This market is shortening also in EU causing an increase in treatment prices. As a consequence, prices for waste treatment has been moving upward since the last 3 years.
- In ELECTRICITY SUPPLY, Hera has a strong track record in expanding customer base:

- Cross selling is performed at marginal costs by selling the all 4 services managed to a wide customer base. Today still only 40% (from 10% in 2008) of gas, water and waste retail clients are served with electricity supply services
- One unique bill to each client for all 4 services allows to maintain 2nd best cost to serve in Italy and a high loyalty.

Extracting value from clients at marginal costs

MERGERS

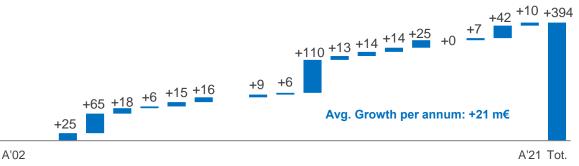

• **23 mergers** of multi-utilities and **22 acquisitions** of mono-business companies (waste, energy supply).

Constant M&A contribution to Ebitda

(M€)

▼

х

- Always targeted only core businesses (gas, water, waste, electricity)
- Targeted multi-utilities in surrounding areas (to maintain a geographical continuity of the served territory) to enhance synergy extraction from Networks (main activity of multiutilities).
- Multi-utilities are merged and paid with new issued shares (share swaps).
- EV/Ebitda multiples have never been dilutive for Hera shareholders.
- Synergy extraction has been the value creation of mergers.
- Within 5Y from the mergers, Hera has extracted an average amount of **synergies** from mergers equal to **+25%** of the original **Ebitda** of the **target company**.

Mergers in surrounding areas to maximize synergies

ACQUISITIONS

- 22 Acquisitions executed focused on core activities of Waste treatment and Energy supply, which are still highly fragmented sectors.
- Market multiples have been applied:
 - €/customer in Energy supply
 - EV/Ebitda in waste treatment
- Deals were settled with cash considerations (no share dilution)
- The **geographical scope** of "Acquisitions" is **national** (not only in the surroundings), since:
 - Waste treatment main synergies comes from plants proximity to clients
 - Energy supply main synergies are not linked to geography
- **Synergies extracted** from acquisitions varies case by case in dependence of the business and the **target company**

Acquisition focused on "cherry picking"

What is key ▼ History Х In a nutshell Growth drivers Organic growth Cost cutting Efficiency gains Top line growth Mergers Acquisitions **M&A multiples** M&A potentials Track record & Risk exposure • **Business & Markets** ▼ Business Plan to '25 V Governance ▼ Sustainability Valuation & "ESG" Ratings

M&A MULTIPLES

- · Never dilutive multiples applied to M&A
- Hera has a clear competitive advantage in M&A, having a market valuation at 'premium' vs peers
- Multiples always exclude synergy potentials (value creation for Hera's shareholders)

Multiples never dilutive thanks also to Hera mkt premium

14/1 / 1

TRACK RECORD & RISK EXPOSURE AT A GLANCE

• Since 2002, in a turbulent environment (major events incurred, such as gas supply market liberalisation, Italian power generation overcapacity, weak GDP growth, climate change events, several waste management crisis, difficult authorization process to expand waste plants, change in regulations, sovereign debt crisis, Robin Hood tax) Hera has performed an un-interrupted growth for 19 years in a row.

Creating value although the turbulent scenario

GROUP EBITDA GROWTH

Resilient and un-interrupted growth since establishment

(Ebitda M€, cumulated GDP growth rate %)

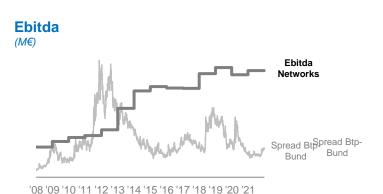

- **REGULATED tariffs** of Networks (about 45% of Group Ebitda) are **protected by demand** cyclicality, inflation and change in interest rates (spread).
- **Prices and demand** of **WASTE TREATMENT** services (about 25% of Group Ebitda) **are growing** due to the tough Italian infrastructural gap.
- **ENERGY SUPPLY** (about 30% of Group Ebitda) demand mainly **depend on the climate** and not on the economic cycle. Hera strategy has substantially neutralized margins from commodity prices fluctuation.

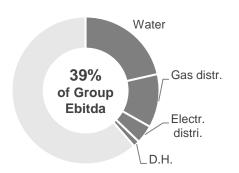

Resilient to macro variables

EBITDA WASTE

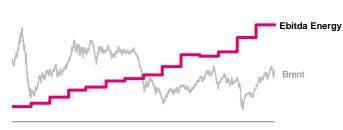

- Waste collection activities are protected from inflation, interest rates and demand cyclicality
- Waste treatment capacity in Italy is short and has caused an increase in demand and prices over the last 5 years
- Waste treatment demand is sensitive to GDP: impacts affect primarily the exported waste (expensive but forced by national shortage) and only afterward the domestic waste treatments.

Price and demand increase on the back of Italian shortage

EBITDA ENERGY

'08 '09 '10 '11 '12 '13 '14 '15 '16 '17 '18 '19 '20 '21

Energy supply

- These activities are managed passing through commodity prices to customers by hedging supply contracts (mainly retail customers) with procurement contract (short term contracts with diversified suppliers) so to neutralize results from commodity price fluctuation.
- Procurement on wholesale market of commodities (long and liquid market) is carried out with trading activities following a risk adverse strategy that sets the maximum value at risk equal to 3.5 m€.

Power generation

• Hera has a **negligible** power generation: results are as a consequence negligibly affected by spark spreads or CO2 certificates price fluctuation.

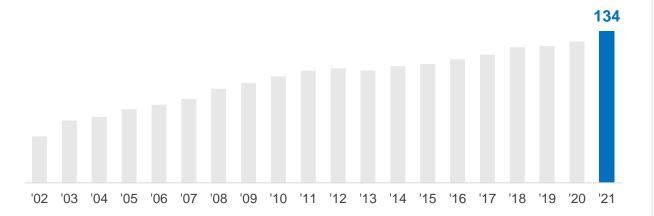

Risk adverse strategy to neutralize risk exposure

VALUE CREATION

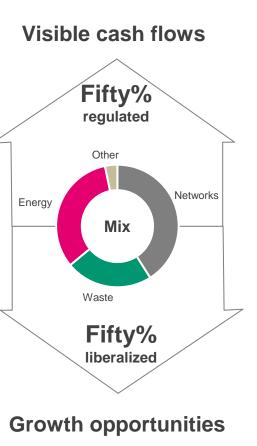

Grown to enhance value creation

BUSINESS MIX

- **Primary utility services** (waste, water, gas) in Italy have been historically managed by **municipal companies** (multi-utility) serving a small local area of citizens (often even in one town) on the basis of a local concession (monopoly)
- Still today, the **utility** services **market** is highly **fragmented** (more than 1,500 multi-utility, Cottarelli report) causing inefficiency to the system and the Government aims at promoting consolidation (e.g. Madia Law, gas tenders)
- Hera has become the 2nd largest multi-utility of the country through 45 M&A deals (main sector consolidator) and implementing effective actions to gain efficiency
- Serving **3.5 million citizens**, a **multi-utility approach** adds relevant advantages:
 - $\circ~$ Maintain a low cost-to-serve
 - Cross selling services to existing clients at marginal costs
 - Increase customer loyalty (one single bill, call centre and shops for all utility services provided)
 - Enhance synergy potentials from mergers

Valuable advantage in a Balanced multi-utility mix

3°

1.7 Min Point of delivery

In these **highly fragmented markets** (>1,000 water operators, >200 gas distributors), **Hera** highlight a **relevant size** compared to the national players:

The activities are based on **local concessions** (long term). The **tariff system** guarantees an allowed return real pre-tax and pre-interests (Ebit) on the Regulated Asset Base (RAB). At the end of the **regulatory period** (4-5 years) the national Authority **ARERA reviews** the tariff system in all regulated businesses giving visibility in the medium-long term.

Value drivers	Water	Gas distr.	Electr. distr.	▲ 60%
RAB (b€)	1.64	1.04	0.37	of Group
Return (real, pre-tax)	4.8%	5.6%	5.2%	Net Invested
Concession length	~2028	Expired	2030	Capital
Independent Authority (national)	ARERA	ARERA	ARERA	

Hera benefits from sizable economies of scale and a reliable regulation

NETWORKS (2)

- Hera's Water local concessions last on average to 2028
- Water business includes:
 - Fresh water distribution
 - o Metering
 - o Sewerage management
- Hera Water activities has highlighted **KPIs among national best practices** (Mediobanca studies) also thanks to relevant capex (1.95 b€) sustained since 2002.
- Water tariffs in Italy are still one of the lowest in EU and for this reason water infrastructures highlight a significant gap compared to EU countries (about 60 b€ gap) causing every year a significant amount of penalties from authorities to Italian small – medium sized water operators (mainly).
- Since 2012 the ARERA took over the regulation in Water and designed a new tariff system that sustains and incentives capex. Since then Italian capex has tripled in Water activities, being returns fully protected by inflation, demand cyclicality, interest rates and guaranteeing a premium/penalties in case of outperform/underperform on efficiency and service quality targets. Authority tariff "review" will incur at year end (end of regulatory period.

Stable regulatory framework

NETWORKS (3)

Tenders

- Gas distribution local concessions has expired all over the country
- The 220 Italian operator will go through a **tender process** (now ongoing) to regain a new concession (of the length of 13 years).
- Rules for Gas tenders have been set identifying 177 concessions on provincial basis on areas called ATEMs (broader areas than before). Being the concession areas changed, in each ATEM there are currently more than 1 player. The tender will assign the concession to an unique winner that will need to pay for the assets owned by the loosing players.
- Small-mid sized player will face difficulties in competing with large player. We expect
 that this tendering process will reduce the number of player from 220 down to about
 20 players.

Hera have expansion potentials in reference territories thanks to tenders

WASTE COLLECTION (1)

What

Value drivers

- · This regulated activity refers to collection of urban waste and sweeping activities
- Tariff system today sets a return equal to 5.6% (increased from the local rule of "inflation + Italian bond yield = ~3.5%). 100% of costs (logistic, management, sorting, recycling) are recognized
- ARERA, the new national authority has just approved a new tariff system that aligns returns with the other regulated activities.
- Increasing the sorted "urban" waste (EU law sets a limit of max 50% of urban waste disposed of directly in landfills) will free capacity in Hera's treatment plants that can then be used to treat more "special" waste
- Waste collection concessions are already expired in E-R region. In this region the tendering process is ongoing

ARERA new tariff system increased returns

WASTE TREATMENT (1)

- Hera is the Italian leader in waste treatment having about 92 plants with a total capacity of 7.2 million ton/y.
- Thanks to the **market fragmentation** Hera has grown also through M&A in last 5 years:

 Due to the Italian tough shortage in capacity, in last
 5 years special waste (industrial waste or urban waste produced outside Hera's reference territory) treatment prices have increased double digit

the game

The name of

WASTE TREATMENT (2)

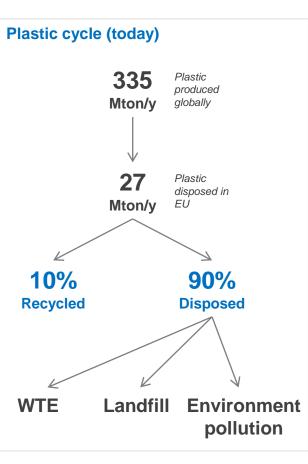

- Prices go up due to the difficulty in obtaining the authorization (from local political authorities) to expand treatment plant capacity.
- As a consequence, a **significant part of waste** produced in Italy **is exported** abroad to other better infrastructured EU countries (**sustaining high logistic costs**).
- Urban waste showed to be un-elastic to GDP whereas Industrial waste is sensitive to GDP. Any change due to GDP will affect waste treatment volume starting from those exported (and later on the waste treated in Italy).
 - Increase plant capacity (make or buy).
 - Enhance recycling/reuse/regenerate activities on waste so to reduce use of treatment plants capacity available.
 - Enhance sorting of Urban waste of citizens
 - o Increase sorting of waste from industries (special waste)
 - Expand in-house sorting plants capacity
 - To recycle/reuse/regenerate waste is not only a matter of sustainability but permit also to enhance net profits maintaining same plant capacity.

Domestic waste treatments are independent from GDP

WASTE TREATMENT (3)

- Today **rules are evolving** to force more sustainable use of plastic
- Customer sensitiveness increasing
 on environmental issues
- Corporates are moving ahead stating their aim to increase recycled plastic
- Corporates will need to:
 - change engineering of production process/products

AND/OR

- use more intensively Hera (Aliplast) availble expertise
- Aliplast serve several global corporations in Italy satisfying a demand that they **might significantly increase** on the back of above mentioned trends.
- Aliplast, **among largest EU player** in the industry, highlights an activity of only 0.1 m ton per year.

Potential fast growth of demand due to high sensitiveness

ENERGY SUPPLY (1)

- Hera is the 3rd largest Italian player in a highly fragmented market and it has shown to be the fastest growing company (in terms of client expansion) also thanks to several acquisitions of small players.
- Electricity supply **market** is **70%** held by the **Italian incumbent** helding a large part of 'Maggior Tutela' clients (clients managed with a "regulated" contract and that has still not moved to the liberalized market contract).
- The law forces the full liberalization of electricity supply market in 2024.
- Maggior Tutela clients will mainly be released by the Italian incumbent in favour to the other market players (the incumbent will not be allowed to retain a market share above 50%)

Client expansion (%)

ENERGY SUPPLY (2)

- Supply margins constitute the "thinnest part" of the bill and therefore competition is currently not 'based' on the price level.
- Hera has a negligible Power generation and procures electricity and gas on the wholesale market sterilizing price fluctuation risk, hedging, almost at 100%, procurement contracts with supply contracts.
- Expand customer base, maintain a low "cost to serve" and maintain their loyalty are the key growth drivers for Energy supply business

Full bill breakdown by cost

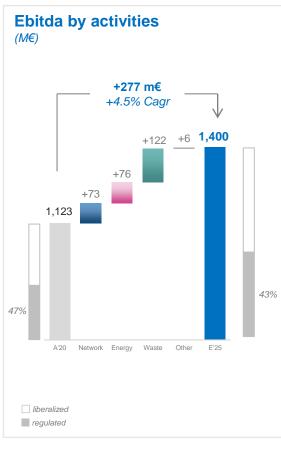

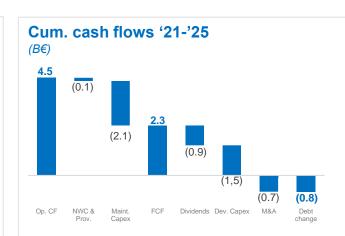

Solid competitive advantages to sustain further growth

LONG TERM VARIABLE REMUNERATION

The Board of Directors, during the meeting held on 22 March 2016, approved the application of a retention plan for a low number of managers, taking into account the weight of their organisational position, an evaluation of the performances obtained during the development process and their age.

The Board of Directors also felt it appropriate to introduce an annually updated evaluation mechanism for gaining access to and renewing/not renewing the monetary plan. In this way, it becomes more of a challenge to obtain 100% of the bonus, in that it is obtained only if the targets are reached during each of the three years in question.

The incentive recognised in 2019 comes to maturity in 2019 – 2020 – 2021 and will be paid in 2022. The amount of the incentive comes to 50% or 100% of Gai in the three-year period, i.e. 17% or 33% of yearly Gai.

See the Report on remuneration for further details.

SELF-REGULATORY CODE

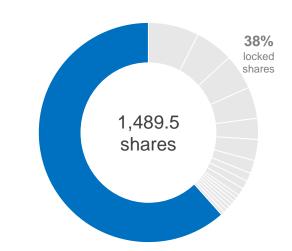

Art. 1	1 Rol	le of the Board of Directors
Strategic role of the Board of Directors	\checkmark	The BoD is given a mandate for the widest powers in ordinary and extraordinary management of the Company.
Report to the Board	\checkmark	The delegated bodies report to the BoD and the Board of Auditors at least every three months on the activity carried out.
Orientation of the Board towards accumulated offices	✓	Limit of 1 office in listed companies for executive administrators. Limit of 2 offices in listed companies for non- executive administrators.
Self-evaluation of the Board	\checkmark	Yearly evaluation with the support of an external and independent consulting firm.
Art. 2 Br	reako	down of the Board of Directors
Role of the Chairman		The Board of Directors has conferred management mandates to the Chairman, owing to the organisational complexity of the Hera Group.
Formation of the Board (induction)	\checkmark	Detailed reports on issues involving business, investments, organisation, market scenario, regulatory evolution.
Lead Independent Director	✓	At a meeting held 16 December 2020, the Board of Directors appointed as lead independent director of the Company the independent director Erwin Paul Walter Rauhe.
A	Art. 3	Independent Directors
Number of independent members	\checkmark	Hera's Board of Administration is made up of 13 (out of 15) non-executive independent directors.
Periodic verification of independence	✓	The Board of Directors evaluates the independence of its directors and the Board of Auditors verifies the correct application of the criteria, in compliance with the Self- Regulatory Code.
Art. 4 Creation a	and f	unctioning of the Internal Committees
Remuneration Committee	\checkmark	Made up of 4 non-executive independent members, 3 of which having experience in accounting and financial matters. Link
Control and Risk Committee	\checkmark	Made up of 4 non-executive independent members. Directors with experience in accounting, financial and risk issues are included. <u>Link</u>
Ethics Committee	\checkmark	Made up of 3 members, one of which is a non- executive independent director acting as Chairman and two experts in the subject. Link

Art. 5 Appointment of the directors			
Appointment Committee		The functions of the Appointment Committee are reserved for the Board of Directors.	
Succession plan		The BoD, considering that the executive directors reflect the main shareholders, has decided that it is not necessary to elaborate a succession plan.	
Art.	6 Re	muneration of the directors	
Limits to short-term variable remuneration	\checkmark	Variable remuneration foreseen only for executive directors, with a limit of 40% upon reaching 100% of the objectives and up to a maximum of 46% in case of outperformance.	
Deferred payment of long- term variable remuneration	\checkmark	Deferred variable retribution related to reaching the Group's operating and financial objectives for 2016-17-18 introduced for the CEO. Payment foreseen for when the 2018 accounts are closed. The maximum long-term remuneration comes to 100% of GAI.	
Resignations, layoffs or termination of employment	\checkmark	A clause has been introduced for executive directors, establishing 18 months of indemnity.	
Clawback clause	\checkmark	Ex-post correction mechanisms foreseen of the remuneration system for executive directors.	
Remuneration plan and stock options		A remuneration plan based on assigning financial instruments is not foreseen.	
Art. 7 System	of ir	nternal control and risk management	
Strategic role of the internal control and risk management system	\checkmark	Integrated system in the most general levels of organisation and supervised by the Executive Chairman and the CEO.	
Internal Audit	\checkmark	The person responsible for this function reports to the Vice Chairman and provides information as to his work every three months to the Executive Chairman, the CEO, the Control and risk committee and the Board of Auditors.	
Whistleblowing	\checkmark	The Ethics committee provides a direct and reserved channel for all stakeholders interested in drawing attention to possible behaviour that contravenes the ethics code and the values promoted by the Group.	
Art. 8 Board of auditors			
Breakdown and functioning of the Board of auditors	\checkmark	Made up of three standing members and two alternate members. The members possess the requisites of eligibility, independence, honour and professionalism established by regulations.	
	Ar	t. 9 Investor relations	
Person responsible charged with managing		The Company has provided itself with a section of management dedicated to investor relations,

APPROACH TO BUSINESS EVOLUTION

• Since its establishment, Hera has constantly chased the engagement of the corporate stakeholders, in a relentless attempt to combine economic and social developments. The company is built to last, to help improve society and the environment for future generations, according to the following strategic priorities:

· Hera adheres to prominent programs adopted at global level

CREATING SHARED VALUE

 Measurement goes beyond accountability, as it should determine with objective certainty not only what projects are worth carrying out according to the economic as well as social returns, but rather the impact made by the whole of the company in relation to the EBITDA generated. In the Sustainability Report 2021, Hera has made for the second time the exercise of evaluating the Shared Value generated by the company through a reclassification of EBITDA, according to the 3 Drivers and 9 Impact Areas identified: 47% of Hera's EBITDA has been generated through Shared Value activities and projects.

Ebitda CSV: 570.6 million Euro (46.6% of Group 2021 Ebitda)

Capex CSV: 452.7 million Euro (about 68% of Group Capex)

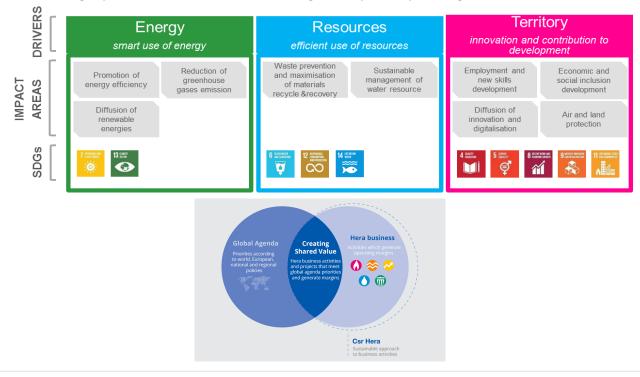

Aiming at increasing Ebitda CSV from 47% to 70% in '30

HOW WE MEASURE CSV

- In the last few years, the role of economic actors within the society has progressively changed from organizations pursuing mere economic returns and exclusively focused on customers to enterprises embedded in a social context through stakeholders relationships. Emergent social needs are acknowledged as a leverage to promote innovation and competitiveness. Meeting such needs is beneficial; it's no longer about mitigating the possible negative impacts with Corporate Social Responsibility activities, but rather to innovate business models, processes, products, and services while pursuing positive and measurable business results. **This approach represents the new frontier in Hera corporate commitment**. Hera is progressively adopting a business model according to the social needs detected by the policies issued at local, regional, national and global level by Institutions (e.g. Un and European Commission or Italian Government). The reason behind this choice depends on the power held by such policies to motivate all actors in taking a clear action and to influence the change.
- Hera has analysed 45 policies at global, national and regional level, more than 400 commitments deriving from the intervention areas identified by such policies, and more than 150 quantitative targets related to its business activities. From this analysis, Hera has defined 9 impact areas (cross-policy pools that gather several commitments and targets) and it regrouped them into 3 Drivers or lines of strategic development, representing a "Call to Action".

ONGOING PROJECTS IN WATER

Water sources optimization

- · Ongoing project aiming to increase Hera water system resilience to climate change
- Right matching between technology (i.e. Desalination, Water conservation) and territory

Leakages reduction

Х

- · Satellite technology used for leakage detection with successful results
- · Aim to apply technology with reference to a 3,000 km portion grid each year (2017-2019)

Water re-utilization

- Project targeting a circular approach in water business management
- Water to be perceived and managed as a durable good (vs current consumable approach)
- Target 40% satellite scannered grid

Water manager introduction in Hera

Energy saving projects

- Electricity consumption based on real needs of WWTP oxidation section
- Controller installation in 34 plants by 2021

-5% energy consumption by 2020 (vs 2013)

-50% energy consumption in oxidation section

Manpower optimization

- Smart Water Grid to control network and to . manage remotely (operation center)
- 100% automated plants (no manpower need)

Value extraction from sewage

WWTP tested:

Modena

~400 remote

mapped districts by

WinCC OA (PVSS)*
