

## The Green Bond

### *Hera's financial policy serving the environment and sustainability*

In July 2014, the Hera Group launched a green bond, with the aim of financing the sustainability investments, so as to contribute via its activities to an improved environmental quality.

The bond issue, availing of the euro medium term notes programme, for a total of 500 million repayable in 10 years, was illustrated to the investors and analysts via a roadshow which was staged in the main European financial marketplaces. The instrument is destined to finance or refinance projects linked to sustainability in four main spheres: the fight against climate change, reduction in emissions, quality in water treatment and the waste cycle.

The instrument envisages a coupon of 2.375% and a return on 2.436%. The orders received were mainly taken from investors resident outside Italy (75%) with France, Germany and the UK which reported the greatest percentages, and a predominance of asset managers. 69% of demand came from investors who have Environment, Social and Governance (ESG) among their investment criteria, so-called “sustainable” investors.

The Hera Group thus unveils, in Italy as well, a form of financing already used in Europe by other leading utilities, which places funding at the service of the environment, with resources which will then be specifically allocated to investments linked to improving the environmental performance in the area.

The list of the projects eligible for funding has been established by Hera on the basis of precise environmental criteria and subsequently confirmed by DNV GL to ensure the correct allocation of the funds. With regard to each sphere of the project, a set of indicators have been identified which reflect the environmental benefits associated with the individual initiatives. These indicators are shown within the various sections of the chapter “Environment and future generations” in this Sustainability Report.

### Use of the funds received via the Green Bond (in millions of Euro)

%	Total funds raised	Number of projects	2006-2015 investments	Investments 2016	Unallocated funds
Increase in energy generation from non-fossil sources	57.1	10	55.4	2.0	-0.3
Increase in energy efficiency	219.1	7	205.1	18.4	-4.4
Increase in the use of waste-to-energy plants for the treatment of waste	173.2	4	173.2	-	-
Improvement of the water treatment plants	31.9	4	26.9	7.1	-2.2
Increase in separate waste collection and reduction in the use of landfills	18.8	1	9.8	2.1	6.9
<b>Total</b>	<b>500.0</b>	<b>26</b>	<b>470.5</b>	<b>29.5</b>	<b>-</b>

Downstream from the fund raising, 26 projects were financed/refinanced, belonging to the categories indicated in the table presented above. The overall increase in projects financed in 2016 reached Euro 500 million, covering the entire amount of the bond.

### The Green Bonds in Italy and Europe

Green bonds are those which associate environmental-type investments and activities with the funds raised in a clear manner. The investments are identified by very specific sustainability criteria: for example, the reduction in climate change, the efficient use of resources and renewable energy.

The increase in issues of green bonds continued in 2016, and on the basis of the last report of the Climate bonds initiative reached \$118 billion of issues, double with respect to 2015.

In Italy, the Hera Group was the first to launch this new financial instrument (for an equivalent value of 500 million) and opened the way up for other operators in the utility sector or otherwise. The bond was very successful, with applications for an equivalent value of around three times the amount of the bond.
